DETAILED ACTION

Claim Objections

1. Claim 6 is objected to because of the following informalities: In line 3, the phrase "the pump" lacks antecedent basis. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2 and 4-10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Laauwe.

Laauwe discloses a fluid product spray head comprising all the featured elements of the instant invention, note obturator 17, sleeve 7/9 and at least one non-radial channel 31.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Laauwe.

Art Unit: 3752

Laauwe discloses all the featured elements of the instant invention, except for the at least one non-radial channel extending obliquely in the lateral wall of the sleeve. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the at least one non-radial channel extend obliquely in the lateral wall of the sleeve of Laauwe, since such a modification would facilitate (i.e. accelerate) the flow through the channels prior to entrance into the swirling chamber and would enhance the expansion and swirling within the chamber.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Meshberg, Beard and Venus show spray heads with swirling chambers and non-radial channels.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven J. Ganey whose telephone number is 571-272-4899. The examiner can normally be reached on 7:00-5:00; M, Tu, W and Th.
